ABH Testing Task for position of Test Engineer

Done by: Mirela Husić

ABH Testing Task:

ABH Testing Task Investigate Google Geocoding API service and create test plan
https://developers.google.com/maps/documentation/geocoding/intro#Geocoding

1. Write test cases for this service

2. From all the test cases, identify what you think represents a Smoke Test

3. Identify at least one positive and one negative test for both forward and reverse geocoding

4. Create Github repository and push your assignment solution there

Bonus: With a tool of your own choosing, automate the Smoke Test from #2 (you can use tools like: Postman, JMeter etc.)

Note: Write test cases/test script for API (NOT for UI that is also available in documentation above)

1. Write test cases for this service

TEST CASE 1: For given valid address "Europe" return status "OK"

API request:

https://maps.googleapis.com/maps/api/geocode/json?address=Europe&key=AIzaSyCGNaPfn1SWg0emTNNC8jKVB1Y0HF6VzGY

API result:

…
```
"status": "OK"
```
…

```json

2. From all the test cases, identify what you think represents a Smoke Test

The smoke test is the most basic test which checks if a web service works. We are sending the minimal set of data in API request, and waiting for positive answer, in this case "status"="OK". Smoke tests from all the test cases are:Test case 1 (Europe), Test case 3 (Sarajevo), Test case 13 (1) and Test case 14 (2).

3. Identify at least one positive and one negative test for both forward and reverse geocoding

Positive test cases (TC) for forward geocoding are:

- ➢ TC 1 (Europe),
- ➢ TC 2 (Švedska),
- ➢ TC 3 (Sarajevo),
- ➢ TC 4 (Marka Marulica),
- ➢ TC 5 (marka marulica, sarajevo),
- ➢ TC 6 (Marka Marulića 19, Sarajevo),
- ➢ TC 7 (Milana Preloga 12A),

Negative test cases (TC) for forward geocoding are:

- ➢ TC 8 (skljmnnnd345čklkčlkčk),
- ➢ TC 9 (11111111111111222222225555555888841111111116666666666),
- ➢ TC 10 (no address),
- ➢ TC 30 (nemilana nepreloga 514578),
- ➢ TC 31 (For given valid address components which exclude each other, valid administrative_area "NY" and valid country "GB"),
- ➢ TC 32 (For given valid address components which exclude each other, valid administrative_area "Zagreb" and valid country "BA").

Positive test cases (TC) for reverse geocoding are:

- ➢ TC 36 (valid place_id – The Statue of Liberty),
- ➢ TC 37 (valid place_id – The Sahara),
- ➢ TC 43 (valid latlng - Antartica),
- ➢ TC 44 (valid latlng - Antartica),
- ➢ TC 45 (valid latlng - Antartica),
- ➢ TC 51 (valid latlng, valid parameter location_type and result type "street_address").

Negative test cases (TC) for reverse geocoding are:

- ➢ TC 42 (valid latlng, 0,0),
- ➢ TC 47 (valid latlng 15,42)
- ➢ TC 55 (no latlng)
- ➢ TC 56 (no place_id).
